HR

PROPOSAL · MOBILE APP MVP

Hair Rap by Yoyo, in every pocket.

One app for booking, shopping, rewards and the Academy. Built in React Native, and already working as a clickable prototype you can try on a phone.

- Book in under a minute
- Shop pro hair care
- Rewards & tiers
- Bridal & at-home enquiries
- Android first, iOS next

Prepared by **Harshil Buha** for the Hair Rap by Yoyo team · October 2026

Unofficial concept prototype, built only from public information: the menu, prices, product catalogue, logo and photography all come from hairrapbyyoyo.com, and are shown here only to demonstrate the idea. Service durations are not published, so they are estimates. Not affiliated with or endorsed by Hair Rap by Yoyo.

WHAT I LEARNED

A premium brand with a lot to offer, and no app yet

45,000+
services delivered to 9,000+ clients since 2022, as published on your About page

170+
services on your public menu, priced by stylist level, hair length and facial method

86
products in your online shop from pH, GK, Biotop, Schwarzkopf, OSiS+, Olaplex and milk_shake

Today

- **Flagship:** Shilp Satved, Bodakdev, Ahmedabad. Open 10 am to 9 pm.
- **Services:** hair, colour, treatments, skin, body, nails, hand & foot rituals.
- **Pricing:** cuts and beard by stylist level, from Stylist up to Creative Director (Yoyo).
- **Bridal & groom:** a makeup lounge with its own terms, in Ahmedabad or at a destination.
- **Memberships & Academy:** six HNI and corporate lounge plans, and the Trendsetter Academy.
- **Booking:** through the website's appointment page.
- **No mobile app** mentioned on the website or in my searches.

What an app changes

- **Faster booking** with a saved profile and one-tap rebooking.
- **Reminders by push** help reduce missed appointments.
- **Rewards tiers** give clients a reason to come back.
- **Shop on the phone** for the same products used in the chair.
- **One app for every lounge** as the franchise grows.

Good news: the foundations are already there

from public page source

The website appears to run on **WordPress + WooCommerce**, with **myCRED** (points) and **TeraWallet** (wallet) plugins. That means the app can plug into the existing shop, customer accounts and points instead of starting a separate system from zero. The prototype already reads the shop's public product feed, so the 86 products, names and prices you see in the app are your real catalogue. I would confirm the rest with whoever manages the site.

Small website fix spotted: one link on the */yoyo/* page points to the theme's demo booking page (*paulhair.qodeinteractive.com/appointment/*) instead of your own */appointment/*. Worth redirecting, and the app would avoid this class of problem.

HOW IT WORKS

The customer journey, end to end

Browsing needs no account. Sign-in (mobile number + OTP) only appears at the moment of confirming, so nobody is turned away at the door.

MAIN FLOW · BOOKING AN APPOINTMENT

1. **Discover** — Home: offers, signature services, founder
2. **Choose** — Women / Men, category, options like hair length
3. **Time** — Stylist level, date, free slots
4. **Review** — Price, duration, notes, pay at salon
5. **Confirm** — OTP sign-in, booking reference
6. **Remind** — Push reminder before the visit — Phase 1
7. **Visit** — Directions, call, WhatsApp
8. **Earn** — 1 point per ₹100 on completed visits
9. **Tier up** — Silver, Gold, Black
10. **Rebook** — "Book again" in one tap

SHOP

Browse by brand › Add to bag › Sign in › Place order (pay at salon / on delivery) ›

Online payment — Phase 2

BRIDAL, GROOM & AT-HOME

Choose occasion › Ahmedabad / destination › Date & notes ›

Opens WhatsApp with the message ready

ACADEMY

Process · Quick Tips · Courses · Masterclass › Enquire on WhatsApp › Online enrolment — Phase 3

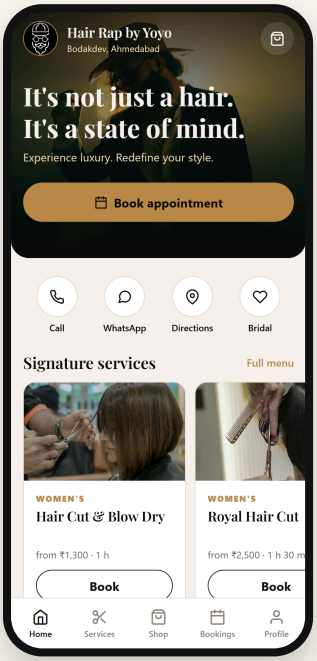

SALON SIDE · ADMIN DASHBOARD — PHASE 1

- Today's bookings calendar
- Edit services & prices
- Stylist availability & leave
- Confirm / reschedule
- Send offers by push
- Reports

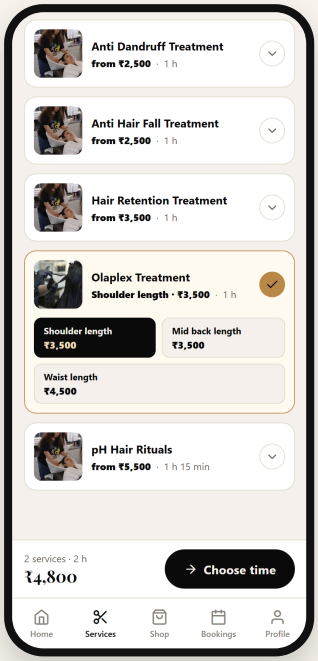

WHAT I BUILT

A working prototype, not just mock-ups

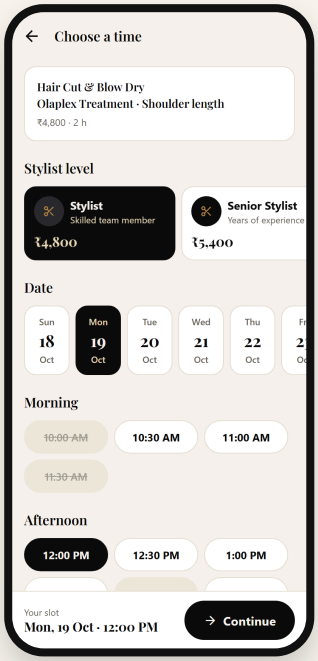

Every screen below is the real app running. The booking flow, slot logic, sign-in, rewards and shop bag all work and survive closing the app. Every price, product and photo comes from your public website, and the price follows the stylist level the client picks.

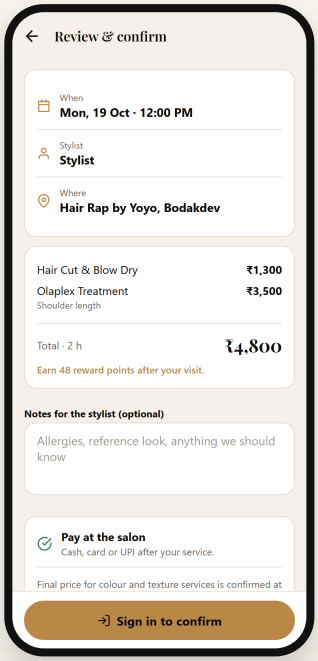

Home

Choose a time
Price by stylist level

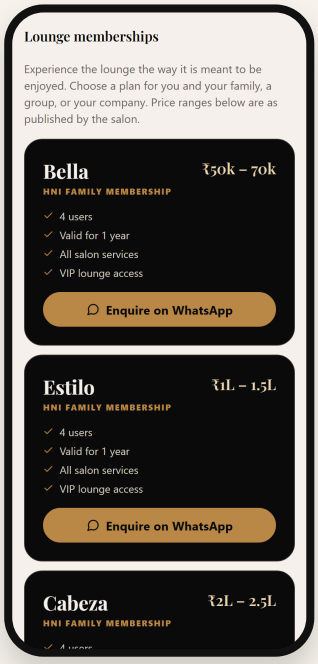

Review
Line items and points

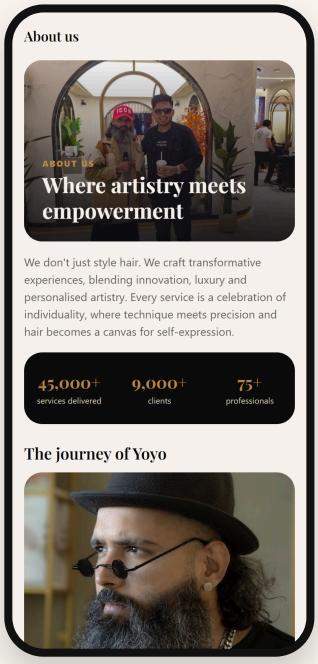

Confirmed
Reference + directions

Shop
Your catalogue, 86 products

Memberships
Bella to Elegante

About & team
Story, stats, people

WHAT IT TAKES

From prototype to the app store

What I need from you

- **Brand kit:** official logo files, colours, fonts, and approval to use your photos.
- **Menu check:** confirm the prices, add service durations (they are not published), and review one price on the Luxury Colour list that looks like a typo.
- **Team & hours:** stylists, working days, breaks, holidays.
- **Booking today:** is a salon software in use, or is it manual?
- **Payments:** a Razorpay (or similar) account for UPI and cards.
- **WhatsApp Business** number for enquiries.
- **Policies:** cancellation, late arrival, rewards rules.
- **Site access** for the WooCommerce / myCRED connection.

How it is built

- **React Native (Expo) + TypeScript**: one codebase for Android and iOS.
- **Backend:** reuse WooCommerce where it fits, plus a small API for bookings and availability.
- **Sign-in:** mobile OTP (Firebase or MSG91).
- **Push reminders:** Firebase Cloud Messaging.
- **Payments:** Razorpay, UPI first.
- **Admin:** a simple web dashboard for the front desk.
- **Android build** targets 64-bit ARM (arm64-v8a) phones, which keeps the install small.

Suggested phases (indicative; refined after the walkthrough)

PHASE	WHAT YOU GET	TIME
0 · Done	Clickable prototype (this document), Android install file, your real menu, prices, products and photography.	Ready
1 · Live booking	Real availability per stylist, mobile OTP, push reminders, admin dashboard, Play Store release.	4 to 5 weeks
2 · Shop & pay	Shop synced with WooCommerce, UPI and card payments, wallet and points from your existing plugins.	3 to 4 weeks
3 · Grow	Memberships and vouchers, Academy enrolment, multi-lounge support for franchise, analytics, iOS release.	4 weeks

Next steps

1. A 20-minute walkthrough of the prototype on a real phone. **2.** You share the inputs above (even partial is fine). **3.** We agree the Phase 1 scope and start.

I would be glad to run the walkthrough at the salon, or over a call.
